A monthly publication filled with industry news, maintenance and safety tips, upcoming events, special coupons, and more!

Car Care = Longevity...

Here are some tips to help improve the longevity of your car or truck.

Regular Maintenance

Routine maintenance of your vehicle, whether “Do-It-Yourself” of your local auto shop - will keep your car in great shape and extend its’ useful life. This includes oil changes to tire rotations to regular washing and waxing.

Checking Fluid Levels

Gauges can go bad or give incorrect readings, so occasional manual checks of your basic fluids can prevent major damage to your engine and other major systems of your vehicle. Regularly check your oil, coolant, brake fluid, and transmission fluid levels.

Tire Care

As the only point of contact between your vehicle and the road, maintaining your tires is essential for both safety and performance.

Check your tire pressure regularly, rotate your tires at recommended intervals, and replace them when needed.

Listen to Your Vehicle

Don’t ignore unusual noises or changes in your vehicle’s performance. If you suspect something isn’t right, run it by a professional to assess the situation as soon as possible. Addressing issues early can, in some cases, end up saving you the cost of major repairs.

Read Your Vehicle's Manual

Your vehicle owner’s manual is a valuable resource that provides specific guidelines for maintenance and care. Take the time to read through it and follow the manufacturer’s recommendations. It may also be key in ensuring that you don’t void any warranty issues that may arise.

Car Safety Tip of the Month!

Tire pressure changes with the rising temperatures – increasing approximately

one to two PSI (pounds per square inch) for every 10-degree increase in outside air temperature. Check your tire pressure more frequently as outside temperatures continue to rise over the next few months.

Did You Know?

Frogs don't usually swallow water. They absorb most of the moisture they need through their skin.
