Car Care Tip of the Month!

When was the last time you checked your battery?

Often overlooked, batteries do need to be checked from time to time. While most automotive batteries are sealed and maintenance free, they do not last forever.

- Check to make sure the battery is properly secured and that the bracket is in good shape.
- Make sure your battery cables are properly secured to the positive and negative terminals.
- Look for any corrosion on the terminals that can be cleaned but may be a sign of other issues.
- Have the voltage tested to ensure the battery is in a good operating range.
